Your meter should look like this with the new AMI electronic read meter.

AMI meter reads will start where the bold (red) box is shown. This is the thousands spot on the meter. The example above reads 53,213.12 gallons of water. Example above would read 53 as your end read on your water bill.

*Storm Water Fee

So, to calculate billing correctly you would take the last read from your last bill. Let's say it was 47 (forty-seven thousand gallons) and your new read is now 53 (fifty-three thousand gallons).

53-47 = 6 (you have used 6,000 gallons of water since your last bill)

Our office bills by the 1,000 (not down to the exact gallon you used this would involve complicated math that could be misconstrued very easily).

Water Charge

First 2 (thousand gallons) water \$17.50

4 (additional thousands gallons) x \$ 6.77 = \$27.08

Sewer Charge

First 2 (thousand gallons) sewer \$18.38

4 (additional thousands of gallons based on water usage) x \$7.67 = \$30.68
